

Hello and welcome to Chemistry induction!

There will be three main tasks this week which comprise a compulsory element to be submitted during the induction week, followed by plenty of other ongoing work to keep your minds occupied over the summer.

No doubt they (your minds) are already in need of some stimulation! Therefore, you have come to the right place.

Alas! we cannot offer the usual practical discovery elements associated with induction work, so I have been forced to offer a more sedentary set of tasks.

The overriding objective then is to give you a good idea of the initial difficulty of the course and its much wider range of knowledge than GCSE.

Of course - you might find the questions challenging, after all they are real AS questions that you wouldn't normally be examined on until a year from now - but what would be the point in giving you GCSE questions? That ship has sailed...

What I cannot give you is any direct experience of the style of teaching, nor the practical aspects of the course, for which you will have to be patient.

Welcome!

M Barley (Head of Chemistry)

Note – the files are labelled in such a way as to give you an idea of what to do and when. Don't access the various 'factsheets' until instructed to do so in one of the three main task sheets.

All completed tasks should be submitted to [barleym@sjwms.org.uk](mailto:barleym@sjwms.org.uk) (unless you are given specific other instructions by central administration) using the format "your name Chemistry induction task number"
